analog cmos microelectronic circuits describes novel approaches for analog electronic interfaces design especially for resistive and capacitive sensors showing a wide variation range with the intent to cover a lack of solutions in the literature after an initial description of sensors and main definitions novel electronic circuits which do not require any initial calibrations are described they show both ac and dc excitation voltage for the employed sensor and use both voltage mode and current mode approaches the proposed interfaces can be realized both as prototype boards for fast characterization in this sense they can be easily implemented by students and researchers and as integrated circuits using modern low voltage low power design techniques in this case specialist analog microelectronic researchers will find them useful the primary audience of analog cmos microelectronic circuits are analog circuit designers sensor companies ph d students on analog microelectronics undergraduate and postgraduate students in electronic engineering

today most if not all microelectronic circuit design is performed with the aid of a computer aided

circuit analysis program spice has become the industry standard software for computer aided circuit analysis for microelectronic circuits this text is ideal as a companion to sedra andsmith s microelectronic circuits third edition but is also a very effective stand alone tutorial text on computer aided circuit analysis using spice

this new supplement is provided free of charge to users of the third edition of microelectronic circuits by adel sedra and kenneth c smith it is intended to enrich the supply of problems beyond those available in the text itself and in additional problems and solutions by kenneth c smith all copies of the text are now shrink wrapped free with your 1995 problems supplement solutions available in spring 1996
